

Terrestrial Habitat

- Green-Duwamish Watershed Boundary
- River Mile
- Parks and Open Space
- Lakes
- Wetlands
- Rivers & Streams
- Wildlife Network
- Rare and Sensitive Plant Habitats & Species
- Habitat Conservation Lands

Noxious Weeds

- Class A (eradication required)
- Class B (control required)

Within the Green/Duwamish Watershed there is a clear demarcation in terrestrial habitat between the Upper Green and the rest of the subwatersheds. Within the Upper Green exist the largest swaths of rare and sensitive habitats and species, as well as habitat lands under conservation and wildlife networks. While there are some conserved habitat lands and wildlife networks within the other subwatersheds, these more suburban and urban environments are where noxious weeds thrive
